WHAT IS CLAIMED IS:

- A circle structure of a motor grader, comprising:
 a drawbar;
- at least one guide shoe attached to said drawbar; an integrated ring-shaped circle gear rotatably supported by at least said one guide shoe;
 - a plurality of circle gear mounting bolts placed at equal pitches on a mounting pitch circle of said circle gear; and
- a circle which is mounted to said circle gear by said plurality of circle gear mounting bolts and rotatable with respect to said drawbar.
- The circle structure of the motor grader according toClaim 1, further comprising:
 - a spigot part at which said circle gear and said circle are fitted to each other.
